LIVE TRACKING APPLICATION

Build a live tracking application that records user's location and displays it on the Google map.

Features-
- User **login** and **signup** feature(user-name,mobile,password) and save the details in local database. Use shared preferences to maintain a login session.
- Provide a button through which user can turn off or turn on the Tracking.
- Track user's location and save it local database.
- Tracking should work even if user closes the app.
- On turning off the location,plot location data from db on map in same activity.
- Use MVVM or MVC architecture.

Bonus-
- Use Kotlin to code.
- Use Architecture components (Livedata,Room and ViewModel).

Feel free to add any additional features.
